

WILCOX OIL COMPANY SUPERFUND SITE REMEDIAL INVESTIGATION PHASE 1 DIRECT SENSING: The EPA ERT began Phase1 direct sensing investigations on November 30, 2015, and will continue through December 15, 2015. A combination of cone penetrometer, light induced fluorescence, XRF, and direct push coring and sampling will be used to investigate and map stratigraphy and source areas. The use of these tools will improve the conceptual site model and focus future field sampling activities. **John Meyer, 214-665-6742.**
